Sign Up: To begin, users should register to the Ad-Hunt to use the application. Email and username fields should be unique. The password should be entered twice and finally the user either can select to be a content creator or business by clicking the radio button.

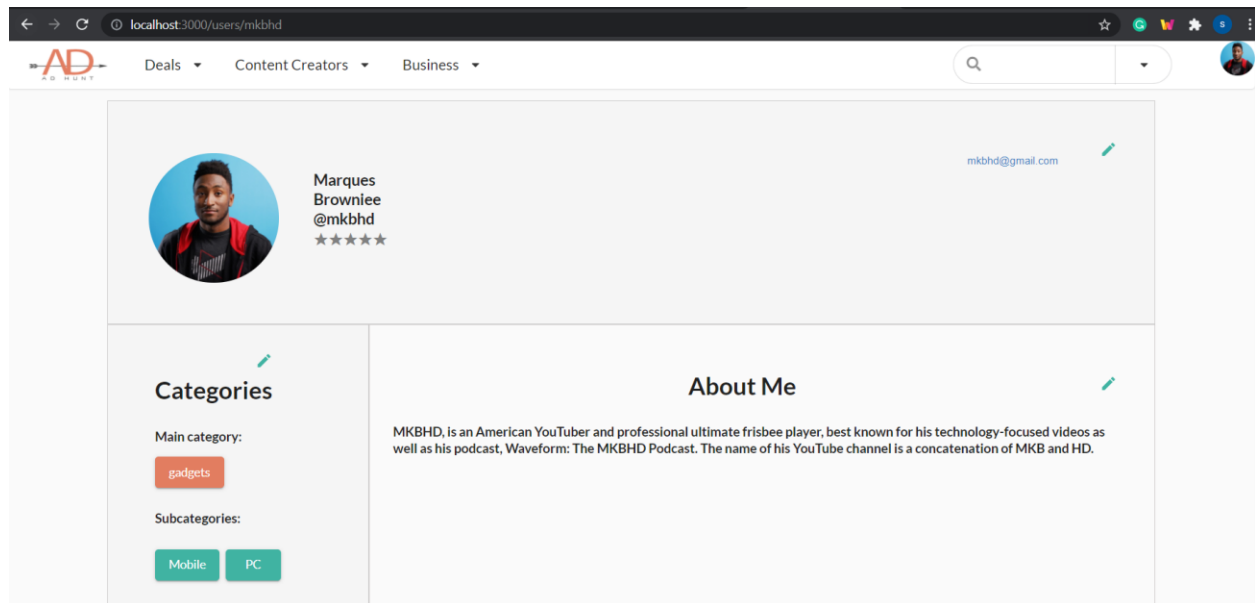

Login: After a successful registration, the user can log into the Ad-Hunt. The login token is valid for 24 hours.

Use Case 1: Management (CRUD) of Deals and Profiles

Profile View: When the logged-in user clicks on the Profile in the drop down, he/she is redirected to the profile page. On this page, it is possible to edit all of the details of the user: name, email, analytics, categories, etc. It is also possible to create and edit deals here. Additionally, reviews of the past work of the user and average rating information are shown here.
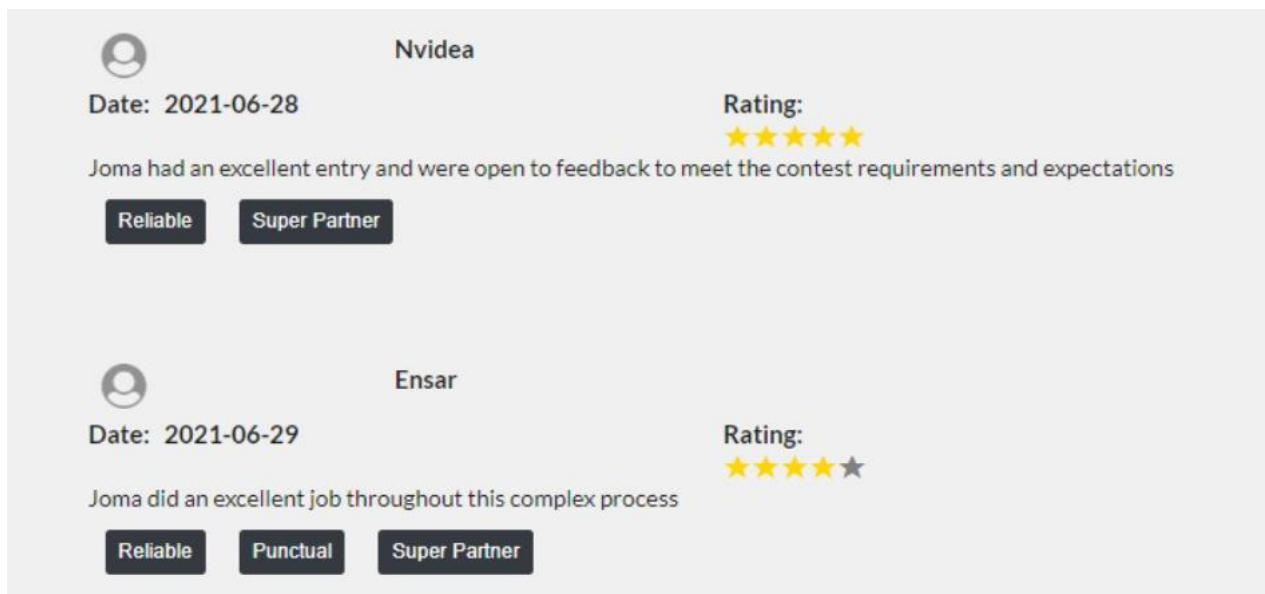

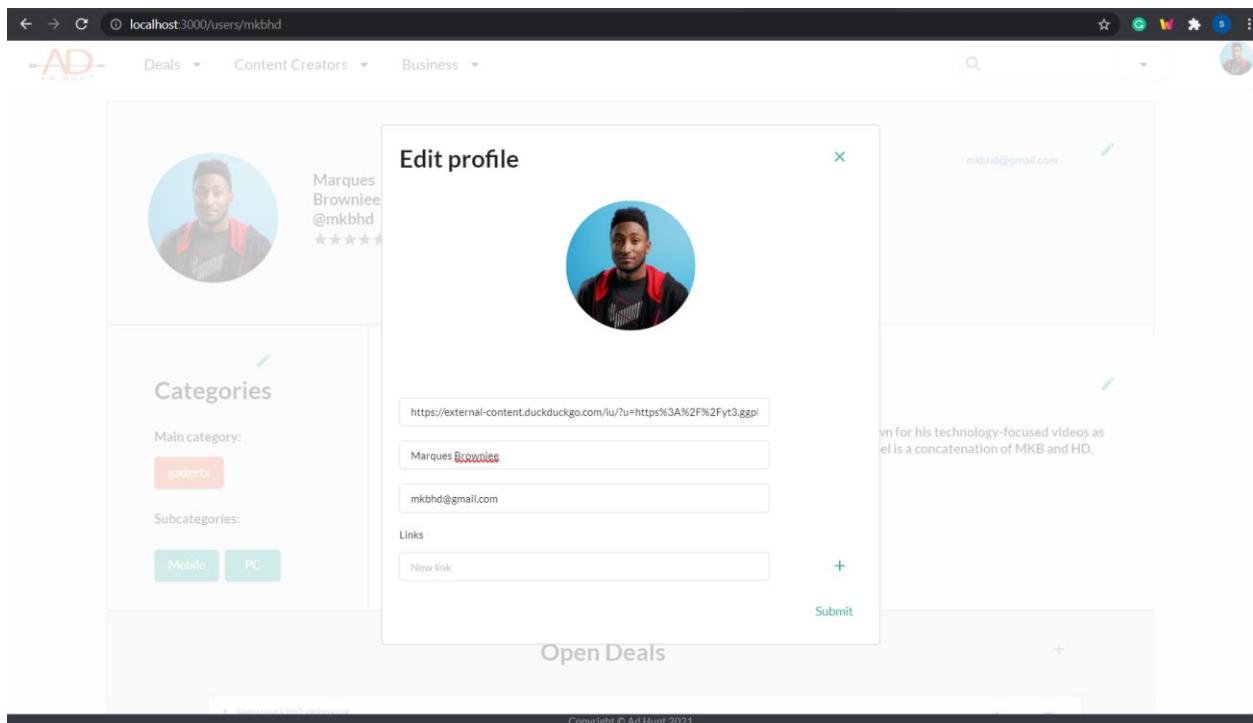

Any other logged-in user can access other users' profile pages (through direct link e.g. "/users/hello" or by pressing the view profile in content creators or business views. However if one user is accessing the page of another user, then he/she is not able to edit the page.

Use Case 2: Searching Content Creator by post and profile
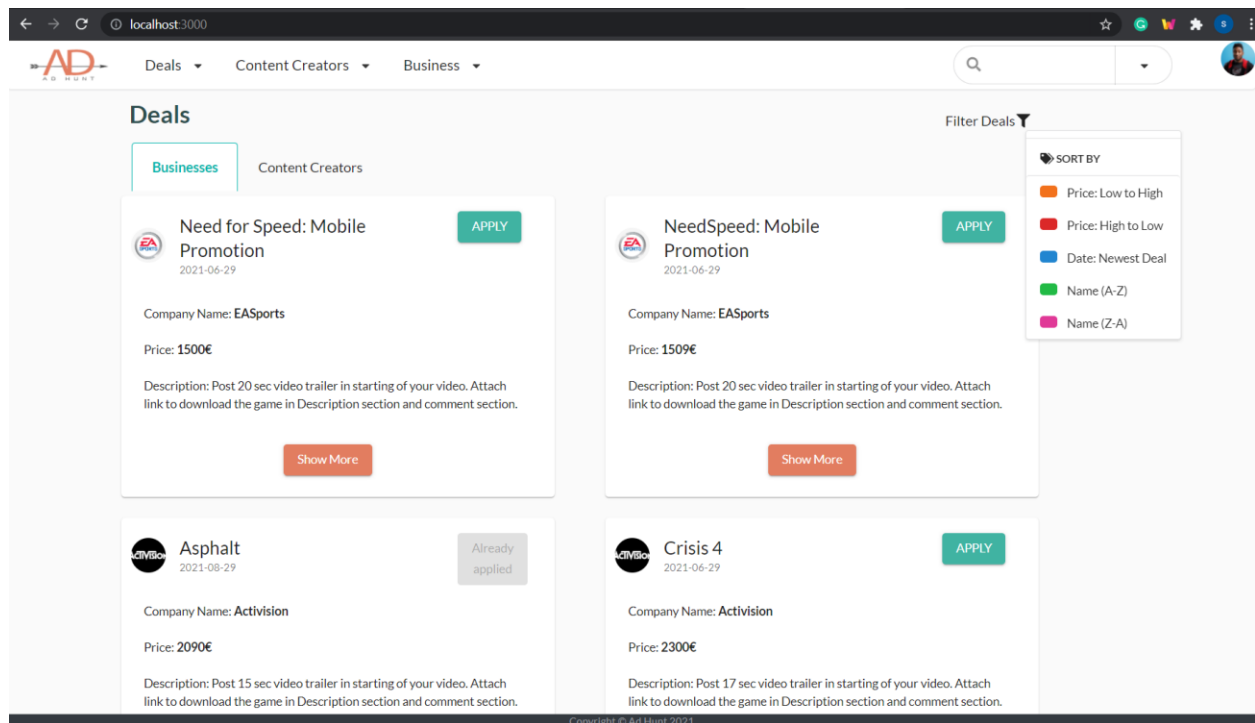

Deals View: Users can see all the deals posted by the creators and businesses. They can apply to the desired deals. Promoted deals are displayed at the top. Sorting of deals can be done on the basis of price, date, title.

Search: Users can search about the deals as well as other users and can directly navigate to their profiles.
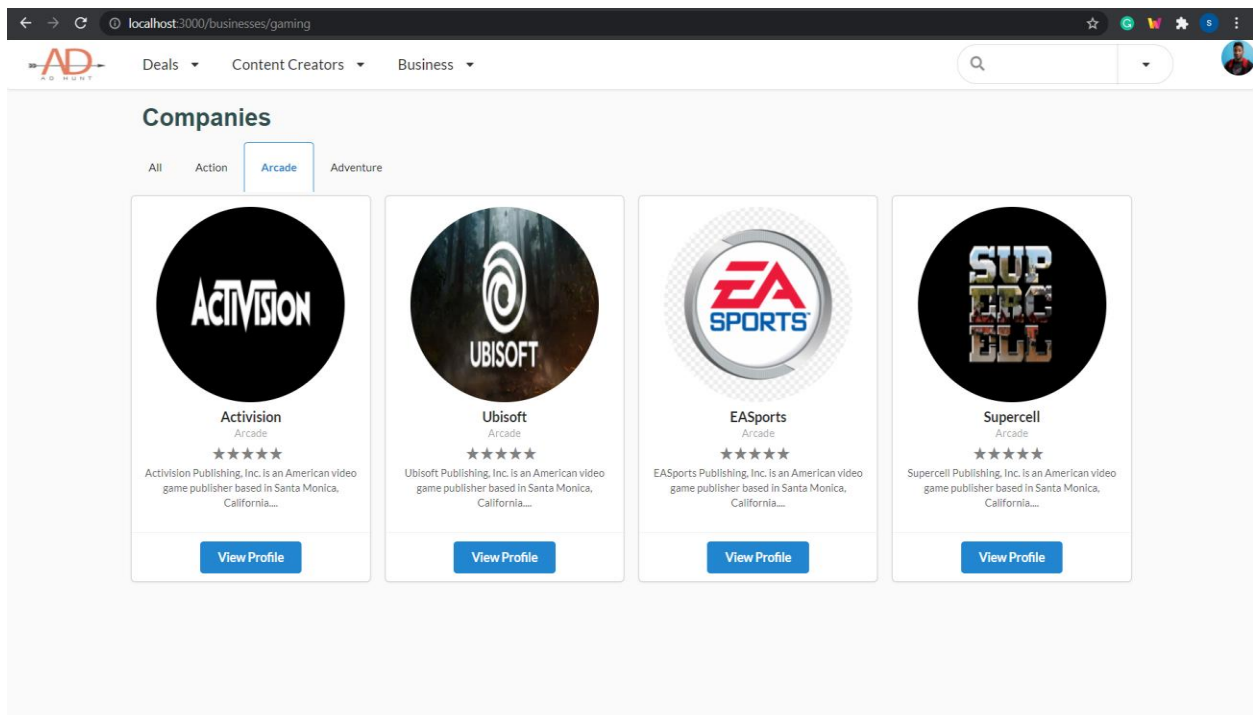

Businesses/Creator View: Users can see all the creators and business owners present on the basis of their categories. All details like description, picture, ratings about them are seen by the user.

Use Case 3: Application and Escrow Payment
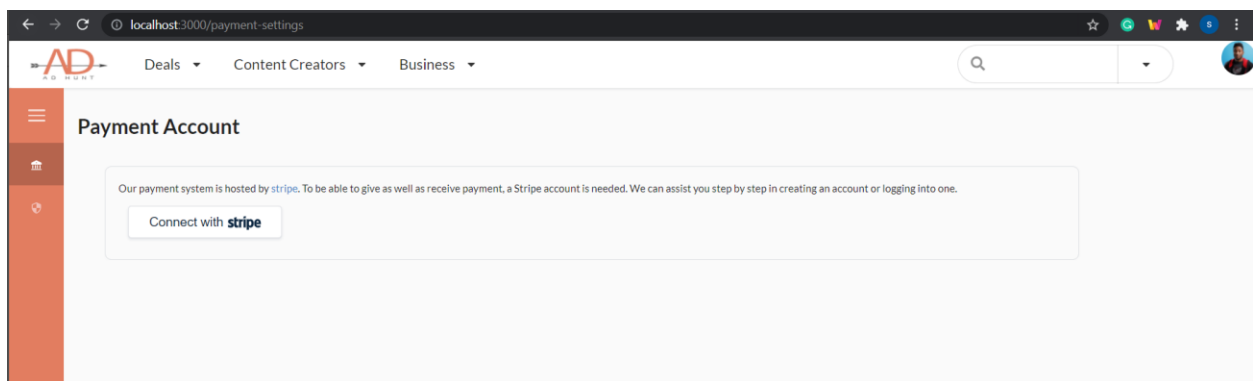

PaymentSettings View: A user can create a stripe account by clicking on the Connect with Stripe button which redirects him to stripe signup and KYC flow (necessary to be able to receive payments escrowed by Stripe).
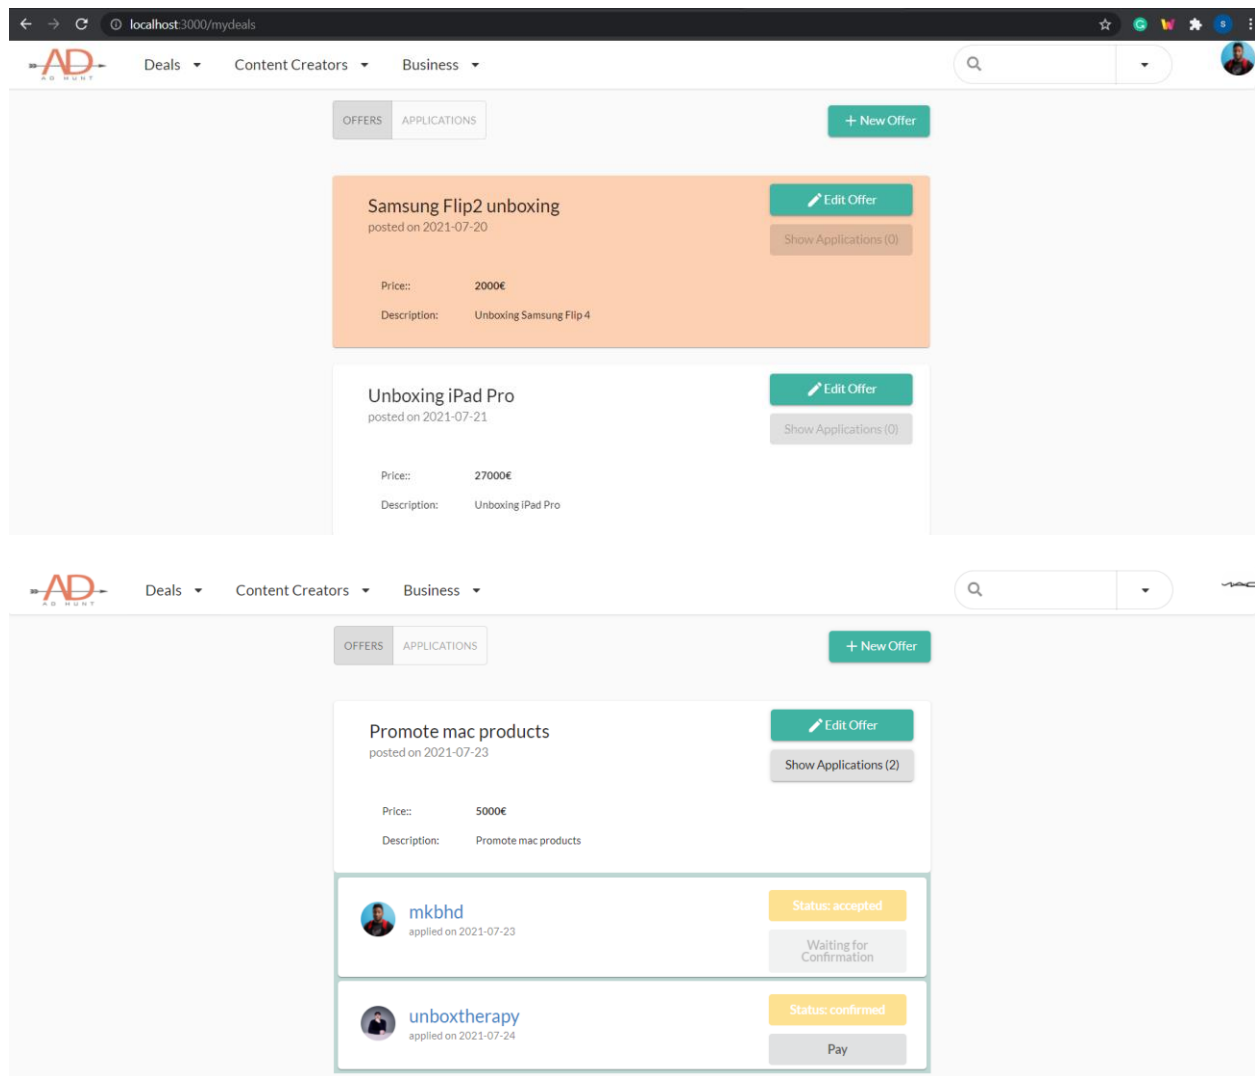

MyDeals View(Offers tab): A user can keep track of his offers, edit them, create new ones and check the applications for each offer. They can also accept, decline, pay or review applications.
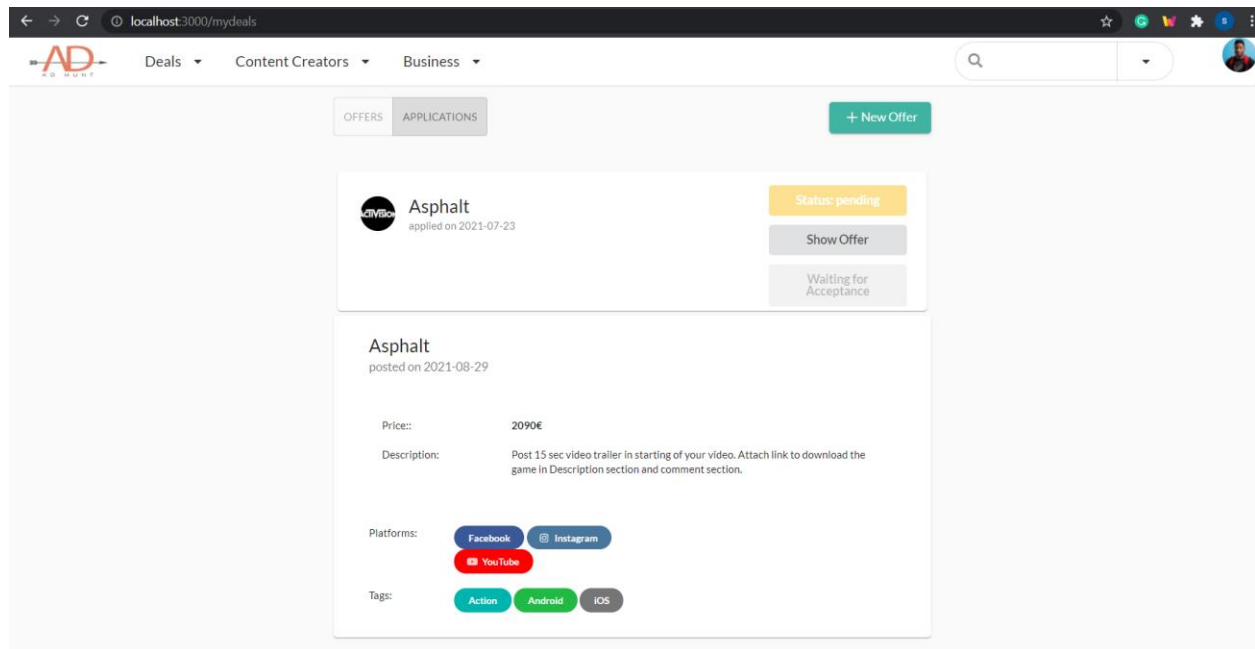

MyDeals View(Applications tab): A user can keep track of his own applications. They can also confirm the application if accepted, confirm that the content is done and review the application.

Use Case 4: Review with tags

Review Modal: The content creator, completed a deal, clicks on the "Done" button to announce the deal is done and and this modal pops up. It has 6 input fields such as rating, selecting relevant tags, and comments for partner and process. The tags are changing according to the ratings, if it is above 3 then positive tags are shown and otherwise the negative tags are shown.

Review   ✕

Rate general experience : ★★★★✭

| SMOOTH | PRACTICAL | SUPER SATISFIED |

Rate business partner: ★★★✭★
